Bred to perform in the big country

# About *Valera Vale*

We are breeders of commercial Droughtmaster cattle underpinned by the genetics of our bull breeding operation. As such we are well aware of the profit drivers in the beef industry and realize that a functional breeder herd achieving high survival and calving rates is the main determinant of profitability in breeder and breeder/fattener enterprises. We **don't** waste selection pressure on anything that **isn't** related to dollars for a commercial operation.

High levels of breeder performance and environmental adaptation are intrinsically linked because only functional cows are able to maintain body condition to survive, lactate, cycle and fall pregnant in our too often challenging environment. Our cows are run under strictly commercial management conditions so that we can select the genetics that will be profitable for our commercial clients, and are expected to present a healthy calf for branding each year after a fourteen week joining period during which it may or may not rain.

The Bulls we offer you are the product of these efficient females. They are run on Buffel grass pastures under the same conditions as our steers, before a 100 day silage preparation at Muan, Biggenden. Len Gibbs and his crew are the masters at safely preparing bulls without compromising their current and future health.

We do not believe in over-preparing our bulls and often face discrimination in the marketplace because of it. However, we continue to under prepare our bulls so they can over perform for our clients. As a result, Valera Vale bulls have a reputation for being able to adapt to any of the conditions experienced throughout Northern Australia. We do hear from clients that bulls grow too big but have never had them criticize them for being small.

We do not trim feet. Ever.

We guarantee our bulls in both the short and long term as will be attested by our long term clients. If one of our bulls does not perform to your standards, we need to know so that we can fix the problem.

We were late converts to the breeding of polled cattle, and did not see any problem with dehorning. Our clients began demanding polled bulls and we struggled to accommodate the demand using phenotypically polled and even DNA tested “homozygous poll” sires. We found the existing DNA tests to be very unreliable and they have only ever been presented as having a less than 100% probability of having the right result. With the development of more accurate SNP DNA test by Neogen we have been able to select for poll cattle more effectively and have had no further instances of horn calves from inaccurately identified “Polled” bulls. This has allowed us to produce large numbers of polled cattle without having to sacrifice selection for other traits. We are now convinced of the value of breeding polled cattle especially in light of the 2% extra mortality recorded in the broadly based Cash Cow project.

We confidently predict that none of our PcPc bulls will produce a horned calf regardless of the horn status of the females. These PcPc bulls can dehorn a herd in one generation.

The Bulls will be Sperm Morphology tested, DNA 35K SNP recorded, Sire, Poll gene, Brahman and Pompes disease tested, have growth rate data on Grass and Silage and Dam history presented

## Our Philosophy

These heifers illustrate the style of animal we breed. After over 50 years of selection we have developed a type of Droughtmaster animal that is proven to handle our environment and has widespread market suitability (live export to MSA).

The core of our selection process is the ability to get in calf every year. The result of this philosophy is an animal with higher Brahman content than is currently fashionable (DNA Verified at around 66%), extremely reliable reproductive performance and quite high growth rates.

Research has proven that *Bos indicus* cattle have a significantly more efficient rumen than *Bos taurus* animals. This is important for the performance of our herd and our business. As recorded in the report of McLean and Blakeley (MLA Project Code B.NBP.0779) *Bos Indicus* cows weighing 550Kg and 6 months pregnant have the nutritional requirements of 1.12 Adult Equivalents whereas the same *Bos taurus* cow requires 1.24 AE. That 10% extra tucker is hard to find sometimes.

We contend we have developed a highly adapted herd by indirect selection for a very efficient Rumen. Our cattle can survive, thrive, reproduce and grow well in the Northern Australian environment.

## Health

The Valera Vale herds are all BJD check tested. The herds have JBA 7 (WA) status so all buyers can make decisions with the confidence that these standards are being met.

The bulls have been comprehensively vaccinated against the 5 main Clostridial diseases, and Leptospirosis, Vibriosis, Tick Fever, 3 Day Sickness and Botulism. They are tested free of Pestivirus persistent infection and the Genetic Pompes Disease. This inherited wasting disease is present in all Bos indicus and Bos Indicus derived breeds but is recessive so by pro-actively testing our bulls we can guarantee none of their progeny will develop Pompes disease regardless of the genetics of the breeders they are mated to.

The catalogue has had a Bull Breeding Soundness Evaluation (BBSE) to Australian Cattle Vets Assoc. standards by experienced and accredited cattle veterinarian Dr. Paul Vetter who will be further endorsing the Valera Vale bulls by buying at the sale. Paul and Margaret's "Cooladdi Park" have used Valera Vale bulls exclusively for decades.

The bulls' semen has been assessed both Crush Side (for live, motile) and in the Laboratory for normal Morphology. There is virtually no evidence that the crush side percentage has any bearing on the number calves a bull produces once the threshold of 30% alive and progressively motile sperm is exceeded. In fact, the variation in crush side percentage is more due to factors not associated with the bull such as collection technique, operator and recent sexual activity.

Morphology on the other hand is a more useful assessment as there is a well established association between the number of calves a bull can produce and %**Normal** sperm and a less well established association with the fertility of his daughters. Importantly, some bulls have consistently very high crush side percentages but have DNA defects which are only picked up by experts with special microscopes in a lab morphology test. These bulls may either be incapable of fertilizing an egg or may produce an embryo that is non-viable and is slipped well before calving. The magic morphology number is set at 50% for a useful bull. In the Bull Power research project, it was

demonstrated that while calf output was multi-factorial, all bulls that failed morphology (less than 50% Normal) performed poorly in terms of number of calves sired.

We believe on our results to date in the Valera Vale herds, we have achieved about 4% higher calving rates by using bulls with good sperm morphology than we were over the previous decades of records.

All the bulls presented in this catalogue have passed a morphology test i.e. they not only have achieved the threshold of 50% Normal Sperm but do not have excessive levels of any particular defect that will impact fertility.

### **Donor cows from our ET program**

As usual, Valera Vale offers **FREE DELIVERY** to **the nearest** major centre in Qld (including Mt Isa, Charters Towers, Birdsville, and South East Qld) on all bulls purchased at the sale.

For buyers outside Qld as an alternative to free delivery, bulls travelling to **WA or NT will receive \$250** and to **NSW \$150 per bull Freight Rebate** to assist with their trip home. Please ensure delivery instructions are clear as outside carriers may be used.

**All the bulls will be at "Muan" Biggenden until Saturday 5th of September and inspection is invited. Clients not able to travel west to Valera Vale can choose their bulls at "Muan" or by viewing the data and pre-recorded individual lot videos. The sale will be live streamed (video & audio) on the Elite Livestock platform allowing clients to make their purchases without leaving home, and the bulls will be delivered to them after the sale at no charge.**

***Bulls are at the purchaser's risk from the fall of the hammer and insurance is recommended.***

**Worked on foot, horses and bikes**

**4% outside agents rebate**

**(Introduced in writing 24 hrs prior and accompanying the client to the sale)**

Valera Vale is located between Augathella and Charleville in SW Qld. The homestead and Station Yards are 12 km up the formed gravel VALERA VALE ROAD which runs north west from the Mitchell Highway between Charleville with Augathella. The turnoff is just south of the Warrego River bridges approximately 43 km from both Charleville and Augathella.

There are daily air services by Qantas and Rex Aviation to Charleville from Brisbane. We will gladly meet any flights and arrange transport.

## Airstrip

There is a 1000m grass/gravel airstrip with windsock running **065/245** at the Homestead.

Co-ordinates: **25 59.05 S 146 23.76 E** Elevation 1115Ft

**There are SWER powerlines between the Homestead and the 065 threshold**

# HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Welcome to the new age of selling livestock in Australia and "Happy Bidding"

-  1 Simply go to [www.elitelivestockauctions.com.au](http://www.elitelivestockauctions.com.au) using your desktop, laptop, iPad, iPhone or android device
-  2 Click on the "Sign Up" page / link
-  3 Create a bidding profile using the bidder registration page.  
*(You can either register as a livestock agent, company or private buyer.)*
-  4 Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue
-  5 Click "Register"
-  6 You will then be notified by email that an account has been created

-  7 Once an account has been created you are all "Set to Bid"
-  8 Each auction can then be viewed by clicking "Live Auction" logo on the Elite Livestock Auctions website
-  9 Once you receive email notification that your account has been created please go to the sale you wish to bid at and click "Request to Bid"
-  10 The sale agents will then approve your application to bid and on the sale catalogue you will see "✓ Bid Request Approved"
-  11 On Sale day simply login, click "Enter Auction" on the catalogue page and you can start bidding.  
*(There is no need for software download)*
-  12 At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.
